

Tire Cleanup 2012

It's more than just time for spring cleaning!

It's time to eliminate mosquito breeding locations! Anything that holds water longer than 7 days can produce mosquitoes, and mosquitoes don't just bite; they can spread disease. One tire can produce many thousands of mosquitoes. The Twin Falls County Pest abatement District is encouraging everyone to take advantage of Southern Idaho Solid Wastes **Tire Amnesty Day on Saturday May 5**. You can take up to **4 passenger tires (without a rim)** to the Landfill or transfer station for **FREE DISPOSAL!** (Fee for some truck and tractor tires.)

Let's clean up and protect public health at the same time!

Although tires are a haven for mosquitoes, they can be found in almost any place that holds water. Cans, birdbaths, rain gutters, toys, and water troughs are all capable of harboring mosquitoes. Therefore, it is important to drain anything capable of retaining water at least once a week to prevent larvae from hatching!

For more information Contact Southern Idaho Solid Waste (208) 432-9082 or the Twin Falls County Pest Abatement District. (208) 733-2338 or www.tfcpad.org
